

## Innovative Teaching Practices : 2018-2019

**Flipping Classrooms:** In this technique students are made active participant in the learning process by giving them the onus of learning. Teachers only provide requisite resources and students take the charge of collecting information. The students have to construct knowledge, fill up the gaps and make proper inferences as and when required. It strengthens independent learning and increases the interest level of the students.

**Group Discussion:** It is a student centric strategy where they are divided into various groups and are encouraged to discuss on a given topic. The teacher supervises the entire discussion for enhancing the cognitive and affective skill of the learners. The method of group discussion is based on the principle of active participation and principle of learning by listening.

**Multimedia:** This approach of teaching combines various digital tools like text, image, audio, visuals which are integrated into multi sensory interactive platform. The purpose is to make a cascading effect on the learners which cannot be achieved through traditional methods. With the use of multimedia in the teaching and learning process problem based approach can be developed for creative, analytical and critical exposure to the teacher trainees for broadening the professional outlook.
